

Here is the Onçafari edition #30. [Click here](#) to open in your web browser.

ONÇAFARI MONTHLY NEWSLETTER ONÇANEWS #08.23

August 3rd we celebrate the 12 years of Onçafari's existence! We got so much further than we could imagine and we still have many ideas, dreams and paths to follow!

In the beginning, 2011, our main focus was ecotourism and the habituation of jaguars in Pantanal. But, as the years went by, we realized the opportunity we had to gather scientific information about jaguars in the wild and also to create economic and social growth with our work.

This led us to expand our work to other biomes and bases, and organize ourselves in six branches: Ecotourism, Science, Rewild, Education, Social and Forests.

Currently, our focus is acquiring natural areas and creating large ecological corridors, to ensure the conservation of our fauna and flora. Our most ambitious goal is to leave a legacy for nature and for next generations, and to achieve that, we are investing in planning, strategy and people.

Thank you to all our partners, supporters and collaborators who encourage and help us to write the next chapters of our story! We'll move on together!

To celebrate this path and join our cause, come to our event "Once Upon a Time 2050: The Legacy" (Era Uma Vez 2050: O Legado). I'll be honored with your presence!

Mario Haberfeld
CEO and Founder

EVENT ONCE UPON A TIME 2050: THE LEGACY

We are celebrating 12 years on a beautiful journey for environment conservation and socioeconomic development. And which story will we tell future generations?

In celebration, we'll have a charity event with the main goal of fundraising to continue the great legacy we are building.

The event will have a photo exhibition and sale, a delicious cocktail and a fundraising auction with exclusive items. To close up the night, we'll have DJ Marina Diniz cheering up on the dance floor!

Want to join this noble cause and support the event? Send an email to evento@oncafari.org

We'll be waiting for you on September 28th, 19 o'clock, in Hotel Rosewood.

ONÇAFARI RECOMMENDS

A Jornada da Vida: Pantanal
(The Journey of Life: Pantanal)

The two episodes series, which aired in Fantástico, shows the beauties and threats of Pantanal.

After four years of droughts and fires, the biome got its first flood.

Little by little, life is recovering: flowers bloom in the fields, animals find food, and Pantanal again shows the landscape that enchants and impresses.

In the first episode, we see the jaguars Aracy and Jací, monitored by Onçafari in Caiman Pantanal, representing the rebirth of life in the biome.

WATCH NOW

TEAM OF STARS!

JOACY DE CAMPOS
GENERAL MANAGER OF RESERVA SÃO FRANCISCO DO PERIGARA

Born in Poconé, since he was a kid, Joacy helped his father manage the family's farms. At the time he learned all types of work you can imagine, from administrative jobs to fieldwork. This way, he became a manager who is not only a master at his job, but also does the daily work in the property.

Currently, Joacy is the main responsible for the day to day operation of Reserva São Francisco do Perigara, area managed by Onçafari in north pantanal, being a respected and admired leader to all.

INTERNATIONAL PUMA DAY

The species is known as puma, cougar and mountain lion.

It occurs from Canada to Chile, including the entire Brazilian territory.

It is the second largest feline in the Americas and can occupy different types of environments throughout the continent, such as deserts, tropical forests and temperate forests.

Cubs are born with spots all over their bodies, a pattern that disappears during their growth, giving way to a more uniform color.

In August it's celebrated the International Puma Day, also known as cougar (Puma concolor), an important day to share information and curiosities about this species!

Our work in the rewild branch has its focus on, besides jaguars and maned wolves, the pumas!

Currently, the pumas Chico and Nala are going through the rehabilitation process with our team in Reserva Santa Sofia, Pantanal and, in July this year, after almost two years of work, the male Oliver returned to wildlife in Caiman Pantanal!

STRAIGHT FROM THE FIELD: PARQUE NACIONAL DO ITATIAIA

We carried out the first monitoring campaign in Parque Nacional do Itatiaia (PNI), our new base in the Atlantic Forest. The monitoring has 15 camera traps distributed in high ground, with a vegetation formation of fields, and in the low ground, where forests predominate

We registered 26 mammal species, among them ocelot, lesser anteater, collared peccary, robust capuchin monkey and puma.
